Environmental Sustainability Commitment

Avalon Construction, Inc. is committed to responsible environmental practices in all aspects of our operations and strive to be a leader in promoting this concept.

As a locally owned company providing commercial construction services, we recognize that our work has an impact on the built environment and the communities we serve. We are committed to minimizing that impact through practical, measurable actions and continuous improvement.

Our Environmental Focus Areas

- **Waste Reduction & Diversion** — We prioritize waste minimization on construction and renovation projects, seeking opportunities to divert materials from landfill through recycling, reuse, and proper disposal practices.
- **Responsible Material Selection** — Where practical and aligned with project requirements, we consider lower-impact materials, including low-VOC products and materials with recycled content, particularly on healthcare and commercial interiors.
- **Efficient Operations** — We maintain equipment and vehicles to support efficient operation, reduce unnecessary fuel consumption, and limit emissions associated with our construction activities.
- **Water & Resource Stewardship** — On applicable projects, we support water-wise practices and responsible resource use consistent with local Utah requirements.
- **Regulatory Compliance** — Avalon maintains compliance with applicable federal, state, and local environmental regulations and supports client-specific environmental requirements on projects.
- **Client Partnership** — We work with clients to help achieve their sustainability goals, including those related to healthcare facility standards, green building practices, and operational efficiency.

Ongoing Commitment

This statement reflects Avalon Construction's public commitment to environmental sustainability. We will continue to refine our practices, set practical targets, and improve our understanding of our operational environmental footprint as our company grows.

Avalon Construction is committed to conducting our business in a manner that is responsible to the environment, our clients, and the communities of Utah in which we work.
